

<b>SA #1</b>	<b>Getting Started - "People Matters" because People DO Matter</b>
--------------	--

**WELCOME:** If you have arrived at this site even before the first class meets, you may be planning to get an early start with text and materials for BIO 2500, General Botany. I look forward to getting acquainted with you and your class for this Fall Semester. I value very highly the quality of personal friendship and comradery which God has enabled me to develop with students in my 31 years at Cedarville and I am anticipating great opportunities for this year as well.

**PEOPLE MATTER:** Because people matter in our teaching at Cedarville, we will be devoting most of our first class meeting to "people matters" such as getting acquainted, formation of "cooperative learning groups," and general discussion of our responsibilities. Therefore, our emphasis in this Study Assignment (SA #1) has little to do with course content. However, if you came to this website with the intention to get a head start in General Botany, the links below will be helpful.

**TEXTS:**

Because of suitable weather for field botany and ecology labs in August to early October, I will be introducing some ecology along with the "field botany." Dr. Mark Gathany will then be using the text in BIO 2600 General Ecology, in Spring. Here are the texts with a brief commentary:

Stern, K.R., J.E. Bidlack, S.H. Jansky. 2008. *Introductory Plant Biology*. 11th ed. McGraw-Hill, Boston, MA

[I was able to gain assurance from our bookstore that the **11<sup>th</sup> edition** would be available in sufficient quantity to assure that all students could successfully acquire a copy (even though the 12<sup>th</sup> edition is now available) because Stern is a widely used text. Therefore, I will teach from the 11<sup>th</sup> ed. and request that you to invest in a used copy of this edition rather than the 10<sup>th</sup> edition to avoid frustration of differences in page numbers and content.]

Molles, M.C. Jr. 2008. *Ecology: Concepts and Applications*, 4<sup>th</sup> ed. McGraw-Hill, Boston, MA  
[We will use parts of this text in Fall Semester; Dr. Gathany will use it as the principal text in General Ecology, Spring Semester. Again, we are assured that used copies are available.]

Barnes, B.V. & W.H. Wagner, Jr. 1981 or 2004. *Michigan Trees...* U. of Michigan Press, Ann Arbor, MI. [This text is used as a resource in BIO 3520 and BIO 3610 or may be resold easily.]

Silvius, J.E. 2008. *General Botany Laboratory Manual*. Cedarville University. To be sold through the bookstore at cost of printing. It should be available by August 15; not available used.

I'll be glad to answer your questions: My office is ENS 272, or e-mail [silviusj@cedarville.edu](mailto:silviusj@cedarville.edu)

**STUDY PLAN:** To obtain helpful suggestions in developing an effective "study plan", please click on "[Reading and Study Plan](#)" which is linked to "Lecture Resources."
